### GLOBAL EXPERT EXCHANGE

- 13:30 – 16:30**      **Challenging cases, pioneering techniques, and complications in lower limb procedures**  
*CHAIRMAN:*  
Giancarlo Biamino  
*MODERATOR:*  
Roberto Ferraresi
- 15:40 – 15:45      How surgical strategies and diabetic foot infections link to revascularisation results
- 15:35 – 15:40      Cre8 BTK polymer-free DES technology: the Activ8 clinical trial  
**Enrico Marone**
- 15:30 – 15:35      Multidisciplinary experience with diabetic foot patients in Mexico
- 15:25 – 15:30      Managing diabetic foot in Brazil
- 15:45 – 15:50      Angiographically directed ("Angiographosome concept") complex tibiopedal reconstruction
- 15:50 – 15:55      Pedal access for BTK CTOs
- 16:25 – 16:30      The technique of pedal arch angioplasty  
Tatsuya Nakama
- 16:00 – 16:25      Live case transmission from Palermo
- 15:55 – 16:00      Pedal puncture with ultrasonographic guidance
- 14:55 – 15:25      Live case transmission from Leipzig
- 14:50 – 14:55      Treatment of a concomitant CFA perforation and distal lower extremity acute thrombosis  
Peter Soukas
- 14:20 – 14:25      Role of hybrid procedures in replacing aortobifemoral bypass, critical role of the CFA
- 13:45 – 14:20      Live case transmission from Sao Paulo
- 13:40 – 13:45      Improved mortality using distal embolic protection devices during peripheral vascular intervention
- 13:35 – 13:40      Popliteal artery embolisation in superficial femoral artery interventions: incidence, risk factors, treatment, and prognosis
- 14:25 – 14:30      A new multifunctional catheter for difficult peripheral access  
Gioachino Coppi

**We are asking all faculty members to strictly respect the given time limits.**

## Wednesday, January 29, 2014

- |               |                                                                                                                                                                                                                       |
|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 14:30 – 14:35 | Management of highly calcified aortic and iliac lesions                                                                                                                                                               |
| 14:45 – 14:50 | Outcomes of deep femoral artery stent coverage during SFA interventions                                                                                                                                               |
| 14:40 – 14:45 | Technique of percutaneous direct needle puncture of calcified plaque (PIERCE) in superficial femoral artery or tibial artery to facilitate balloon catheter passage and following dilatation of the calcified lesions |
| 14:35 – 14:40 | Endovascular revascularisation of the internal iliac artery for lower limb ischaemia                                                                                                                                  |
| 13:30 – 13:35 | The short and mid-term result of self-expanding nitinol stents for treatment of femoropopliteal arteries following suboptimal balloon angioplasty                                                                     |
